

TourGuard AI

AI-Based Tourist Verification System

- ✓ Counts tourists in starting image
- ✓ Counts tourists in current image
- ✓ Detects missing tourists
- ✓ Detects extra persons
- ✓ Generates verification report

TourGuard AI is an intelligent system that uses YOLO11 object detection to verify tourists in group photos. It compares the starting group with the current group to detect missing tourists or extra persons and generates an instant verification report.

1. TOUR START PHOTO (GROUP_START.JPG)

2. START GROUP DETECTION (YOLO11 OUTPUT)

3. CURRENT GROUP PHOTO (CURRENT_GROUP.JPG)

4. CURRENT GROUP DETECTION (YOLO11 OUTPUT)

5. TOURGUARD AI REPORT

	Expected Tourists	: 51
	Current Tourists	: 56
	Missing Tourists	: 0
	Extra Persons	: 5
	Status	: ⚠ ALERT - Extra Persons Detected : 5

Tour Start Photo (group_start.jpg)

2. Start Group Detection

3. Current Group Photo (current_group.jpg)

4. Current Group Detection

TourGuard AI Report

Expected Tourists : **51**

Current Tourists : **56**

Missing Tourists : **0**

Extra Persons : **5**

Status : ⚠ ALERT -

Extra Persons Detected : **5**

HOW IT WORKS

1. Tour Start Photo
2. YOLO11 Person Detection
3. Expected Tourist Count
4. Current Group Photo
5. YOLO11 Person Detection
6. Current Tourist Count
7. Compare Counts
8. Missing / Extra Detection
9. Alert Generation

KEY FEATURES

- Automatic Tourist Counting**
Counts total tourists in both images using YOLO11.
- Missing Tourist Detection**
Identifies tourists who are missing in the current group.
- Extra Person Detection**
Detects persons who are not part of the original group.
- Verification Report**
Generates instant summary report with counts and alert status.
- Flag & Log**
Allows manual flagging and stores records for future reference.

TECHNOLOGIES USED

- YOLO11 (Ultralytics)
- Python
- Gradio
- OpenCV
- Pandas
